Dear Hiring Committee,

Teaching is not simply the delivery of content — it is the deliberate craft of meeting students where they are and guiding them toward who they can become.

That conviction has shaped every role I have held over nearly two decades in education and continues to draw me toward collaborative, student-centered school communities such as yours.

I hold a Bachelor's degree in Education from Youngstown State University and a Master of Education degree, and I bring extensive international experience integrating technology meaningfully into the learning environment while maintaining a strong focus on authentic student learning and human connection.

During my work in curriculum and instructional support, I introduced differentiated digital assessment workflows using NWEA MAP data that helped teachers identify skill gaps earlier in the academic term, contributing to measurable improvements in student readiness within a single semester.

I approach educational technology with a simple guiding question: "Does this actually serve the learner?" That philosophy has allowed me to adapt thoughtfully to evolving classroom environments while remaining grounded in sound pedagogy, collaboration, and reflective practice.

I have also developed a strong professional interest in the responsible integration of artificial intelligence within education, particularly in helping students use emerging technologies ethically, critically, and productively rather than as substitutes for genuine learning. My work increasingly focuses on how AI-assisted tools can strengthen writing development, revision practices, and student engagement while preserving academic integrity and independent thought.

Beyond technical integration, I bring a background in team leadership, instructional design, and cross-cultural education that allows me to collaborate effectively with colleagues, support diverse learners, and adapt quickly to changing institutional needs.

I am a practitioner who believes that great teaching is reflective, data-informed, and deeply human.

I would welcome the opportunity to discuss how my experience, educational philosophy, and commitment to thoughtful innovation align with the goals of your school.

Thank you sincerely for your time and consideration.

Sincerely,
James Gray
